## Bicycling as part of the Powell-Division Transit and Development Project

Making bicycling accessible, convenient, comfortable and safe is an integral part of the Powell-Division Transit and Development Project. Bicycling benefits transit and personal mobility by reducing the number of motor-vehicles on the road. This helps reduce congestion, providing access for more riders to transit and their final destinations, and helps reduce greenhouse gas emissions. Bicycling extends the “reach” of transit by providing the first-last mile connection to transit and other destinations within the corridor. The graphic illustrates “access sheds” for active travel modes to transit. Recognizing the synergistic relationship between transit and active modes the Federal Transit Administration (FTA) developed a policy making pedestrian and bicycle improvements eligible for FTA funding.

Source: *First Last Mile Strategic Plan and Planning Guidelines*, LA County Metro and SCOG, March 2014

The Powell-Division Transit and Development Project provides an opportunity for the region, stakeholders and jurisdictional partners to increase multi-modal transportation options in the corridor, including bicycle access along and to the transit route; improve mobility for all users; increase bicycle and pedestrian access to transit; complete multi-modal networks within the corridor; advance planned transportation projects that increase active transportation and encourage physical activity; improve multi-modal access for a range of housing types and businesses in growing communities; advance planned transportation projects that are sensitive to the environment, improve water and air quality and help reduce carbon emissions. Addressing bicycling is recognized as a powerful tool to advance these desired outcomes.

On June 23, 2014 the Project Steering Committee adopted project outcomes and goals. Improving access to transit and creating key places are important themes within the outcomes and goals. The adopted project goals are:

1. **Transportation:** People have safe and convenient transportation options – including efficient and frequent high capacity transit service that enhances current local transit service – that get them where they want to go and improves the existing system.
2. **Well-being:** Future development and transit improvements create safe, healthy neighborhoods and improve access to social, educational, environmental and economic opportunities.

3. **Equity:** Future development and transit improvements reduce existing disparities, benefit current residents and businesses and enhance our diverse neighborhoods. There is a commitment to prevent market-driven involuntary displacement of residents and businesses and to equitably distribute the benefits and burdens of change.
4. **Efficiency:** A high capacity transit project is efficiently implemented and operated.

**Increasing access, safety, comfort and efficiency of bicycling helps achieve the project goals, as well as increasing overall mobility and access within the corridor.** Access to bicycling increases transportation options and expands the reach of transit. Bicycling contributes to the well-being of the communities in the corridor. Improving bicycling in underserved communities helps address equity. And, improving bicycle access will improve the overall efficiency of the project.

This document provides an overview of the bicycle element of the Powell-Division Transit and Development Project and is intended to be used by the Project Steering Committee, the project team and interested stakeholders such as bicycle advisory committees. Decisions regarding the bicycle element will be made by the Project Steering Committee.

Included in this document is a proposed approach to identifying a preferred bicycle concept for the project. This information is intended to guide and inform what bicycle elements should be part of the transit alternative. As the project progresses this document will be enlarged upon and will ultimately:

1. Outline existing conditions for bicycling in the corridor
2. Navigate existing plans and policies that impact the project
3. Report the inventory of projects that have been identified
4. Identify opportunities and challenges to implementation
5. Identify a preferred bicycle concept for the corridor
6. Identify best practice facility design for bicycling
7. Identify projects that would support implementing the preferred bicycle concept that have not been planned
8. Recommend bicycle projects to be included as part of the project
9. Recommend bicycle projects to be included in other plans
10. Report how the project will affect bicycle travel in the corridor
11. Report how increased access to bicycling will increase options for personal mobility

## Recommended Approach to the Bicycle Element of the Project

To achieve the desired outcomes and goals of the Powell-Division Transit and Development Project outlined above, the following steps are recommended to integrate the bicycle element into the project.

This approach is based upon the following principles:

- Build on existing policy, plans, planned projects and recently completed or funded projects.
- Develop a preferred approach that is implementable while providing a high quality bicycling experience and exceptional bicycle access to transit and throughout the corridor.
- Implement a preferred approach that reflects current policy direction.
- No existing bikeways will be removed.

### Five steps in recommended approach:

1. **Develop alternative bicycle concepts for consideration (Project Team and key stakeholder agreement, April 2015).** This document provides three alternative conceptual approaches for improving bicycling within the corridor and integrating the bicycle element within the project. The concepts are intended to provide a starting place for identifying a preferred concept, which could be a hybrid of the alternative concepts or a completely new concept. As the first phase, project partners will review and revise the alternative concepts.
2. **Provide additional analyses if needed (Metro and Project, May 2015-Jan 2016).** This phase could include providing a finer level of detail on gaps and deficiencies in the bicycle network, identifying additional planned projects in local plans, exploring the need for analysis such as bicycle modeling, identifying additional challenges and opportunities associated with the concepts, and identifying impediments to implementation. It is recommended that an on-street parking study be conducted to understand the impacts of removing parking along Division, east of 82nd Ave. This phase will provide additional information needed to develop the preferred concept in step 3. This phase will also identify existing bicycle facilities considered sufficient and appropriate for the roadway conditions and should therefore be maintained as is, and existing bicycle facilities that are deficient and should therefore be improved.
3. **Identify and develop preferred concept (Project Team and key stakeholder input; Project Steering Committee direction, June 2015– Jan 2016).** The preferred approach to integrating bicycling into the project is identified in this phase. The three alternative concepts outlined in this report will be included in the Action Plan completed in June. Design of the overall project will help determine the preferred concept for all of the elements of the project (transit, pedestrian, bicycle, auto). Policy and data will guide identification of the preferred way to address bicycle mobility and access to transit. The preferred approach could be a hybrid of the alternative concepts presented here or a completely new concept. Criteria used to help identify the preferred concept should include:

- connections to businesses and other destinations;
- connections to transit;
- connections for communities of concern;
- increasing levels of bicycling;
- impacts to existing buildings and properties;
- enhancing safety for bicycling;
- enhancing comfort for bicycling; relevant policies and bicycle functional classifications.

A consideration that needs to be included in the discussion is the status of the deferred bicycle improvements in the East Portland Active Transportation Access to Transit project. This project received \$4.2 M of Metro Regional Flexible Funds. The original scope of the project included buffered bicycle lanes along Division from I-205 to 130th Ave. Implementation of buffered bike lanes was deferred for coordination with the Powell-Division Transit Project, with the understanding that those improvements would be included in the Powell-Division Transit Project. It is during this step that the design of those bicycle elements will also be considered. The ultimate design of the buffered bike lanes will be guided by policy and informed, refined and coordinated with the design of the bus rapid transit.

4. **Identify and prioritize projects that support implementation of the preferred bicycle concept (Project Team agreement, April 2015-January 2016).** In this phase, bicycle projects will be identified and prioritized for inclusion within the Powell-Division Transit and Development Project. Projects will be drawn from existing plans, and new projects may also be identified (projects must be in the Regional Transportation Plan to be eligible to receive federal funding; new bicycle projects would be added to the RTP). Implementing the preferred approach identified in step 3 will help guide which projects are prioritized and included. Existing bicycle facilities considered sufficient and appropriate for the roadway conditions will be maintained, and existing bicycle facilities that are deficient will be identified for improvement. Projects such as bicycle parking at future transit stations and way finding will also be identified. Projects should complete and enhance the routes identified in the preferred approach.
5. **Identify additional funding to supplement costs of the project (Project Team, June- July 2017).** While bicycle projects will be included in the Powell-Division Transit and Development Project, additional funding resources should be documented and included in the implementation strategy. Three relevant projects should be noted here because they will improve bicycle and pedestrian access within the corridor and can be leveraged to support the project. The regionally funded Central City Multi-Modal Safety Project (\$6 M), the East Portland Access to Employment and Education Multimodal Improvements (\$9.1 M) funded with Metro Regional Economic Opportunity Funds, and the Division Complete Streets (to Birdsdale) project in Gresham. Elements of these projects will or could support improved bicycle access to and within the transit Project corridor.

## Policy and Plan Context

Oregon and the Portland region have developed strong policies related to supporting and expanding bicycling for transportation. The following policies at the state, regional, and local level provide the policy context for the bicycle elements of the Powell-Division Transit and Development project.

### Federal

- **Federal Transit Administration (FTA) Policy** – establishes a formal policy on the eligibility of pedestrian and bicycle improvements for FTA funding and defines the catchment area for pedestrians and bicyclists in relation to public transportation stops and stations as .5 mile for pedestrians and 3 miles for bicyclists.
- **Moving Ahead for Progress in the 21<sup>st</sup> Century Act (MAP-21)** -Title I, Federal-Aid Highways, Subtitle A – Authorizations and programs, Section 1122 **Transportation Alternatives Program** – provides funding for programs and projects defined as transportation alternatives, including on- and off-road pedestrian and bicycle facilities, safe routes to school projects.
- **Code of Federal Regulations Title 49** – contains the codified U. S. Federal laws and regulations that re in effect pertaining to all forms of surface transportation and transportation security.

### State

- **Statewide Planning Goal 12: Transportation** – transportation plans shall consider all modes of transportation, serve all people, and minimize adverse social, economic and environmental impacts and costs.
- **OAR 660-12, the Transportation Planning Rule** – implements Statewide Planning Goal 12 by supporting plans that increase transportation choices and make more efficient use of the existing transportation system, including bicycle travel, accessibility, transit, reduction in reliance on single occupant automobile use.
- **ORS 366.514: Use of Highway Fund for Footpaths & Bicycle Trails** (see following section)
- **Oregon Transportation Plan** – comprehensively assesses state, regional and local and both public and private transportation facilities and services and builds on the established vision of a balanced, multifaceted transportation system leading to expanded investment in non-highway transportation options.
- **Oregon Public Transportation Plan** – provides a statewide vision for the public transportation system and describes the role of public transit in contributing to the transportation system overall.
- **Oregon Pedestrian and Bicycle Safety Implementation Plan** –includes a list of candidate priority locations based on an objective analysis and then provides a toolbox of countermeasures from which to choose.
- **Oregon Bicycle and Pedestrian Plan** – currently being updated. Provides a vision for the entire state system, including locally owned facilities, while defining the role of the State and ODOT. Includes a design manual for pedestrian and bicycle transportation.

## Regional

- **2014 Regional Transportation Plan (RTP)** – provides pedestrian, bicycle and complete streets policy; performance measures including triple 2010 bicycle mode share target.
- **Climate Smart Strategy** – a strategy to reduce the region’s per capita greenhouse gas emissions from cars and light trucks at least 20 percent by 2035.
- **Regional Active Transportation Plan** – identifies a vision, policies and actions to complete a seamless green network of on- and off-street pathways and districts connecting the region and integrating walking, biking and public transit.
- **Regional Transportation Safety Plan** – identifies ways to cut the number of fatalities and serious injuries for pedestrians, bicyclists and motor vehicle occupants in half by 2035, based on 2005 numbers.
- **Regional Travel Options Strategic Plan** – defines a mission and set of goals and objectives to increase opportunities to walk, bike, share a ride and take transit.
- **East Metro Connections Plan** – an action plan that identifies specific transportation, community, economic development projects for the metro area of east Multnomah County and their phasing over the next 20 years

## Local

- **East Portland In Motion** – a five-year implementation strategy for active transportation projects and programs east of 82<sup>nd</sup> Ave in the City of Portland.
- **Portland Progress** –Portland Bureau of Transportation’s two-year work plan to provide steps to preserve past investments and improve the safety of the transportation system.
- **Portland Bicycle Plan for 2030** – key principles include: attract new riders, strengthen bicycle policies, form a denser bikeway network, increase bicycle parking, expand programs to support bicycling, increase funding for bicycle facilities
- **Portland Transportation System Plan (TSP)** -- meets State and regional planning requirements and addresses local transportation needs for cost-effective street, transit, freight, bicycle, and pedestrian improvements
- **Central City Transportation Management Plan** – encourages economic growth and housing in a compact urban form that also increases the use of alternative transportation modes
- **Portland Central City Plan** – addresses challenges and opportunities to ensure the unique economic, transportation, cultural and educational hub will be a vibrant resource for all Portlanders over the next 25 years and includes the Central City Transportation Management Plan
- **Portland Climate Change Action Agenda** –25% bicycle mode share target.
- **Portland Plan** – encourages active transportation, prioritizes safe and attractive frequent transit service, bikeways and accessible pedestrian connections, including sidewalks; measures include 70% transit and active transportation use by 2035 and 50% Carbon emissions reductions below 1990 levels by 2035.
- **Inner Powell Streetscape Plan** – informs the development of a streetscape plan for Powell Blvd from the Ross island Bridge to SE 92<sup>nd</sup> Ave that includes multi-modal improvements

along Powell Blvd. Calls out SE Powell Bikeway Project #70046 in TSP to retrofit bike lanes to existing street from 71<sup>st</sup> Ave to I-205 in 11-20 years; and Inner Powell/Ross Island Bridgehead Access and Circulation Study which examines local circulation and pedestrian and bicycle access and creates a streetscape plan between Ross Island Bridge and SE 50<sup>th</sup>

- **Portland Comprehensive Plan** – guides the future growth and development of the city and is a generalized, coordinated land use map and policy statement that interrelates all functional and natural systems and activities in relation to the use of lands, including transportation systems.
- **Gresham Bicycle Plan** –existing bicycling facilities and planned/funded bicycle projects
- **Gresham Transportation System Plan** – supports the growth and development of the City as an economically vital and livable community by providing residents and all transportation system users safe, pleasant and convenient access and travel within, to and through the city
- **Gresham Comprehensive Plan** – contains policy statements concerning each plan topic; goals, policies and actions measures and implementation strategies designed to carry out the policies, including transportation.

#### **ORS 366.514: Use of Highway Fund for Footpaths & Bicycle Trails**

ORS 366.514, often referred to as the “Bike Bill,” was passed by the Oregon Legislature in 1971. The law applies to ODOT, cities, and counties and requires the inclusion of facilities for pedestrians and bicyclists wherever a road, street or highway is constructed, reconstructed or relocated.

ODOT provides the following information on the Bike Bill: “The law has three exemptions: Where there is no probable use, or other available ways or other factors indicate an absence of any need; where safety would be jeopardized; where the cost is excessively disproportionate to the need or probable use. The determination that one or more exemption is met must be well-documented. If "other available ways" are identified, these must serve bicyclists and pedestrians as well as or better than would a facility provided on the road, street or highway in question. An example sufficient to indicate other available ways would be providing sidewalks and bike lanes on a parallel or adjacent street rather than along a freeway. An example not sufficient would be choosing not to provide bike lanes and sidewalks on an arterial street and encouraging use of local side streets that do not include bicycle and pedestrian facilities nor offer the equivalent direct route or access as the arterial street.”

ORS 366.514 is a key statute for this project and must be considered as the bicycle element is integrated into the Powell-Division project. In-street road improvements along the preferred transit route may trigger requirements in ORS 366.514 to provide bicycle and pedestrian facilities on the Powell-Division transit route. Typical in-street roadway improvements that trigger the requirements can include moving a curb and rebuilding the entire depth of the roadway bed.

As of yet, no determination has been made on the cross-section widths along the alternative transit routes. Nor is it known if or by how much it will be necessary to move the curb line or widen the right-of-way. How wide the streets along the route will be in various segments and whether or not the curb lines move will largely depend upon whether the bus is in mixed traffic, if there is a dedicated busway in one direction or two and the design of pedestrian and bicycle facilities. Bus rapid transit is a flexible

technology, and the design in some cases may change block by block. The project aims to integrate all modes of transportation that is not cost prohibitive and minimizes impacts to existing buildings and properties, while at the same time supporting and enhancing the bus rapid transit project and meeting the demands for bicycling in the corridor.

### **Planned Bicycle Network Maps**

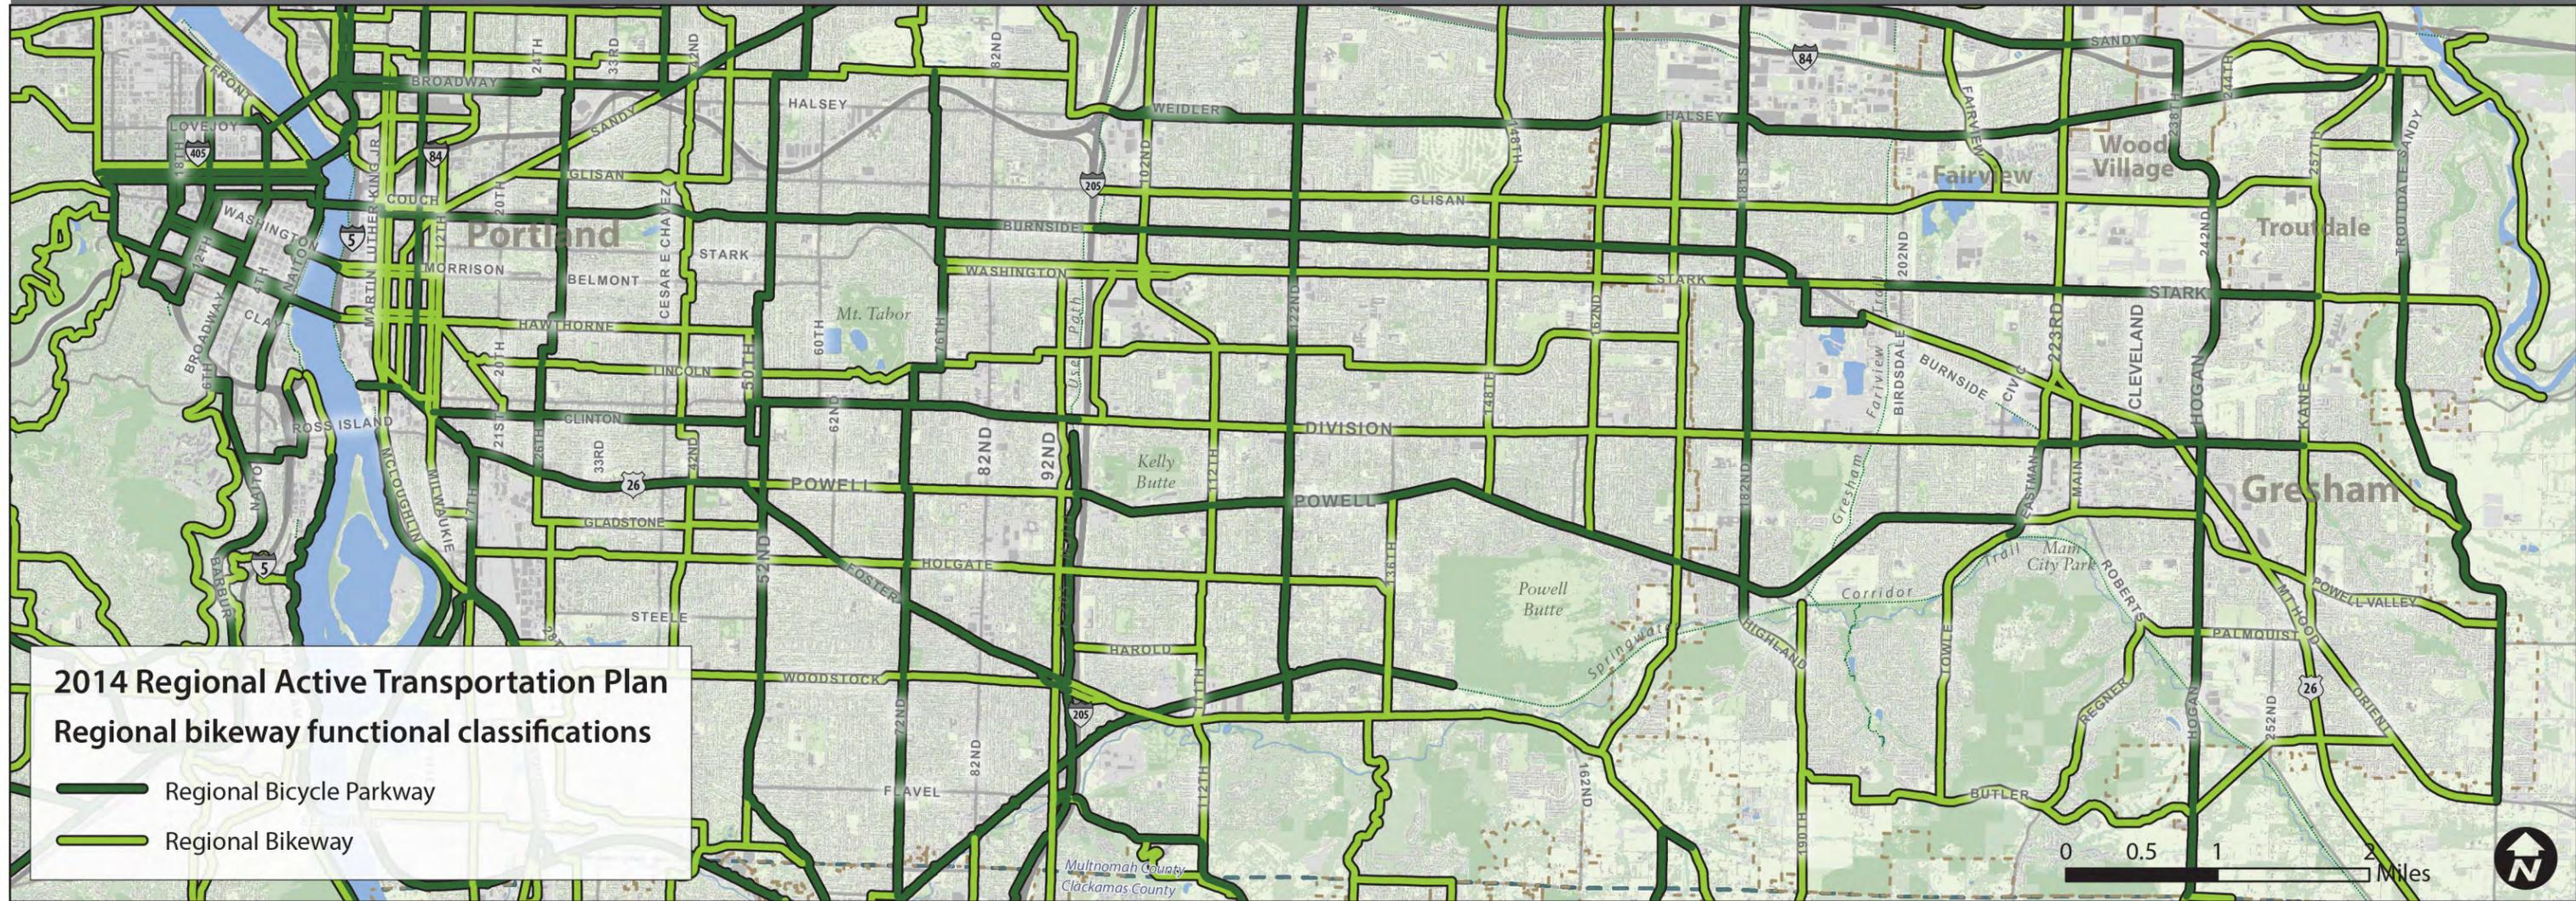

Portland and Gresham Transportation System Plans and the Regional Transportation Plan include policy maps for the planned bicycle networks. The bicycle plans/maps show the adopted bicycle networks and the planned facility type and functional classifications. Planned networks guide future development of the bicycle networks. Functional classifications and planned facilities identified in the Portland and Gresham Transportation System Plans (along with more recent plans or projects) provide policy guidance as the bicycle element of the project is developed.

The following three maps show the regional, Portland and Gresham planned bicycle networks. The 2014 Regional Active Transportation map shows the regional bicycle network and functional classifications within the project study area. Regional Bicycle Parkways are the highest functional class for bicycle routes and are intended to provide a high quality bicycling experience, level of comfort and safety. They form the spine of the bicycle network and are routes that currently serve or will serve higher volumes of bicyclists and provide important connections to destinations. Regional Bikeways are the second functional class and complete the regional level bicycle network. Regional Bikeways located on arterial and collector streets should be designed to provide separation from traffic and provide a high quality bicycling experience. Local Bikeways are not identified as regional routes. However, they are very important to a fully functioning network. They are typically shorter routes with less bicycle demand and use than regional routes. They provide for door to door bicycle travel. In addition to the functional classifications, the Regional Active Transportation Plan and Regional Transportation Plan identify a set of principles and design guidance for developing bicycle facilities on the regional network to implement regional policies related to bicycling.

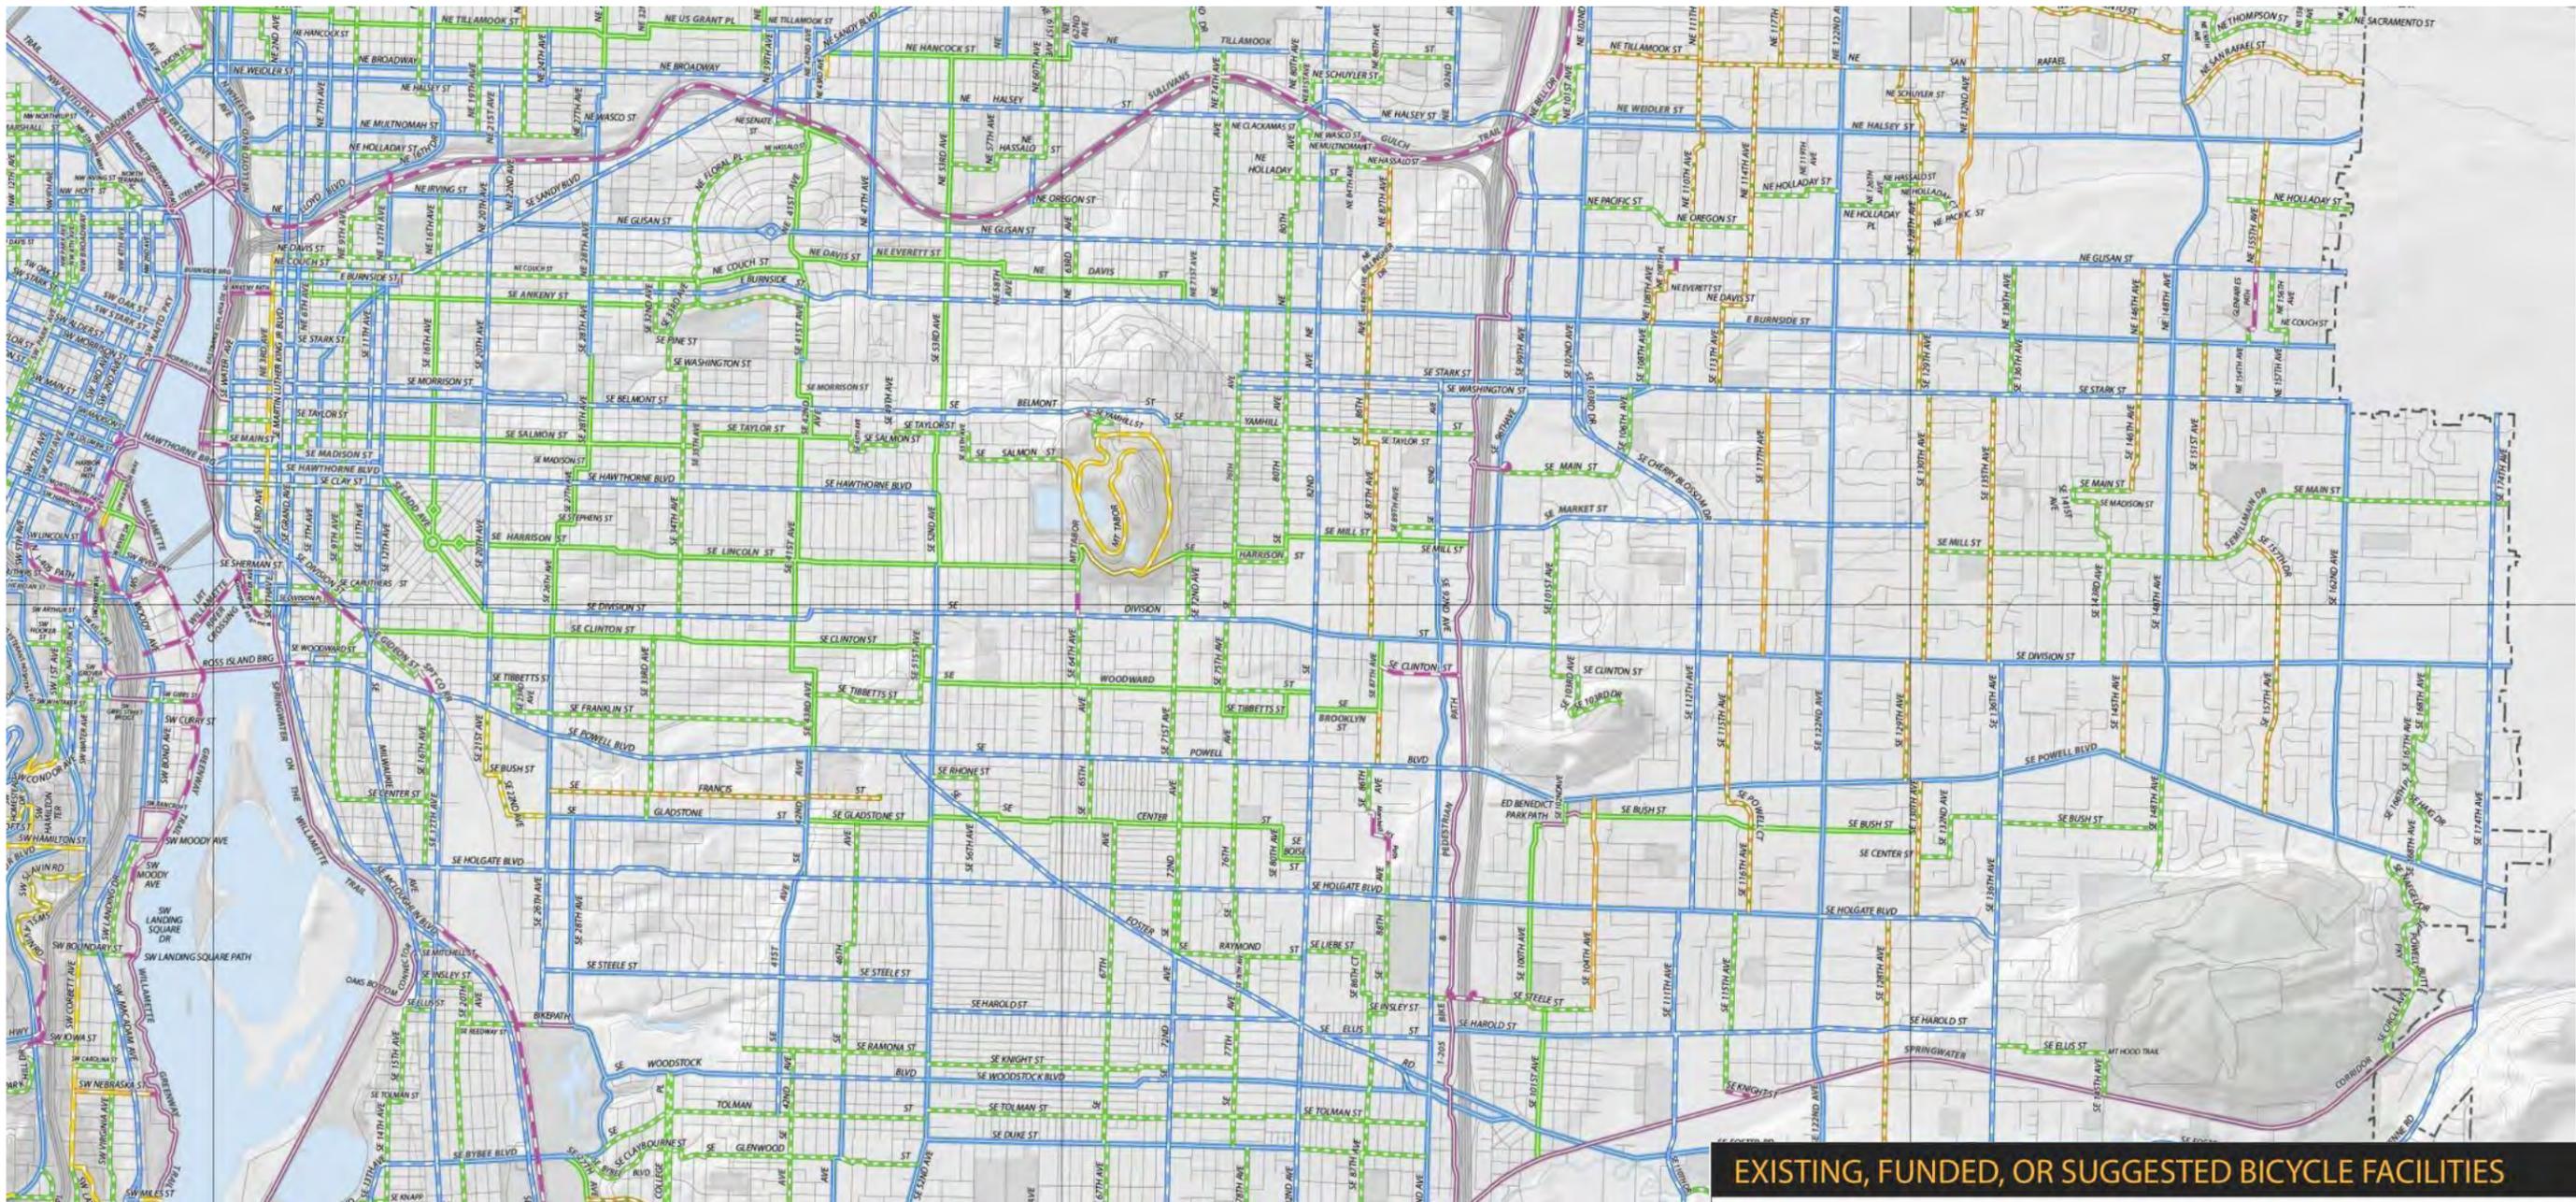

The second map shows the City of Portland's recommended bikeway network, from the Portland Bicycle Plan for 2030, adopted in 2010. The city is currently in the process of updating the Transportation System Plan to include the bicycle plan. The map shows existing, funded or recommended bicycle facilities as of 2010. Some facilities have since been improved. The Portland Bicycle Plan for 2030 provides policy network maps identifying bikeways as Major City Bikeways, City Bikeways, or Local Bikeways.

The third map shows the City of Gresham's Bicycle Plan for 2030. The plan identifies facility types for the major bikeways in the city. Refer to Table 1 for a list of the planned and existing bicycle facilities for each of the transit alternative routes.

# Powell-Division Transit and Development Project

Map: 2014 ATP regional bikeway functional classifications  
 This map shows the regional bicycle network and functional classifications within the project study area. Regional Bicycle Parkways are the highest functional class for bicycle routes and are intended to provide a high quality bicycling experience, level of comfort and safety. They form the spine of the bicycle network and are routes that currently serve or will serve higher volumes of bicyclists and provide important connections to destinations. Regional Bikeways are the second functional class and complete the regional level bicycle network. Regional Bikeways located on arterial and collector streets should be designed to provide separation from traffic and provide a high quality bicycling experience. Local Bikeways are not identified as regional routes. However, they are very important to a fully functioning network. They are typically shorter routes with less bicycle demand and use than regional routes. They provide for door to door bicycle travel.

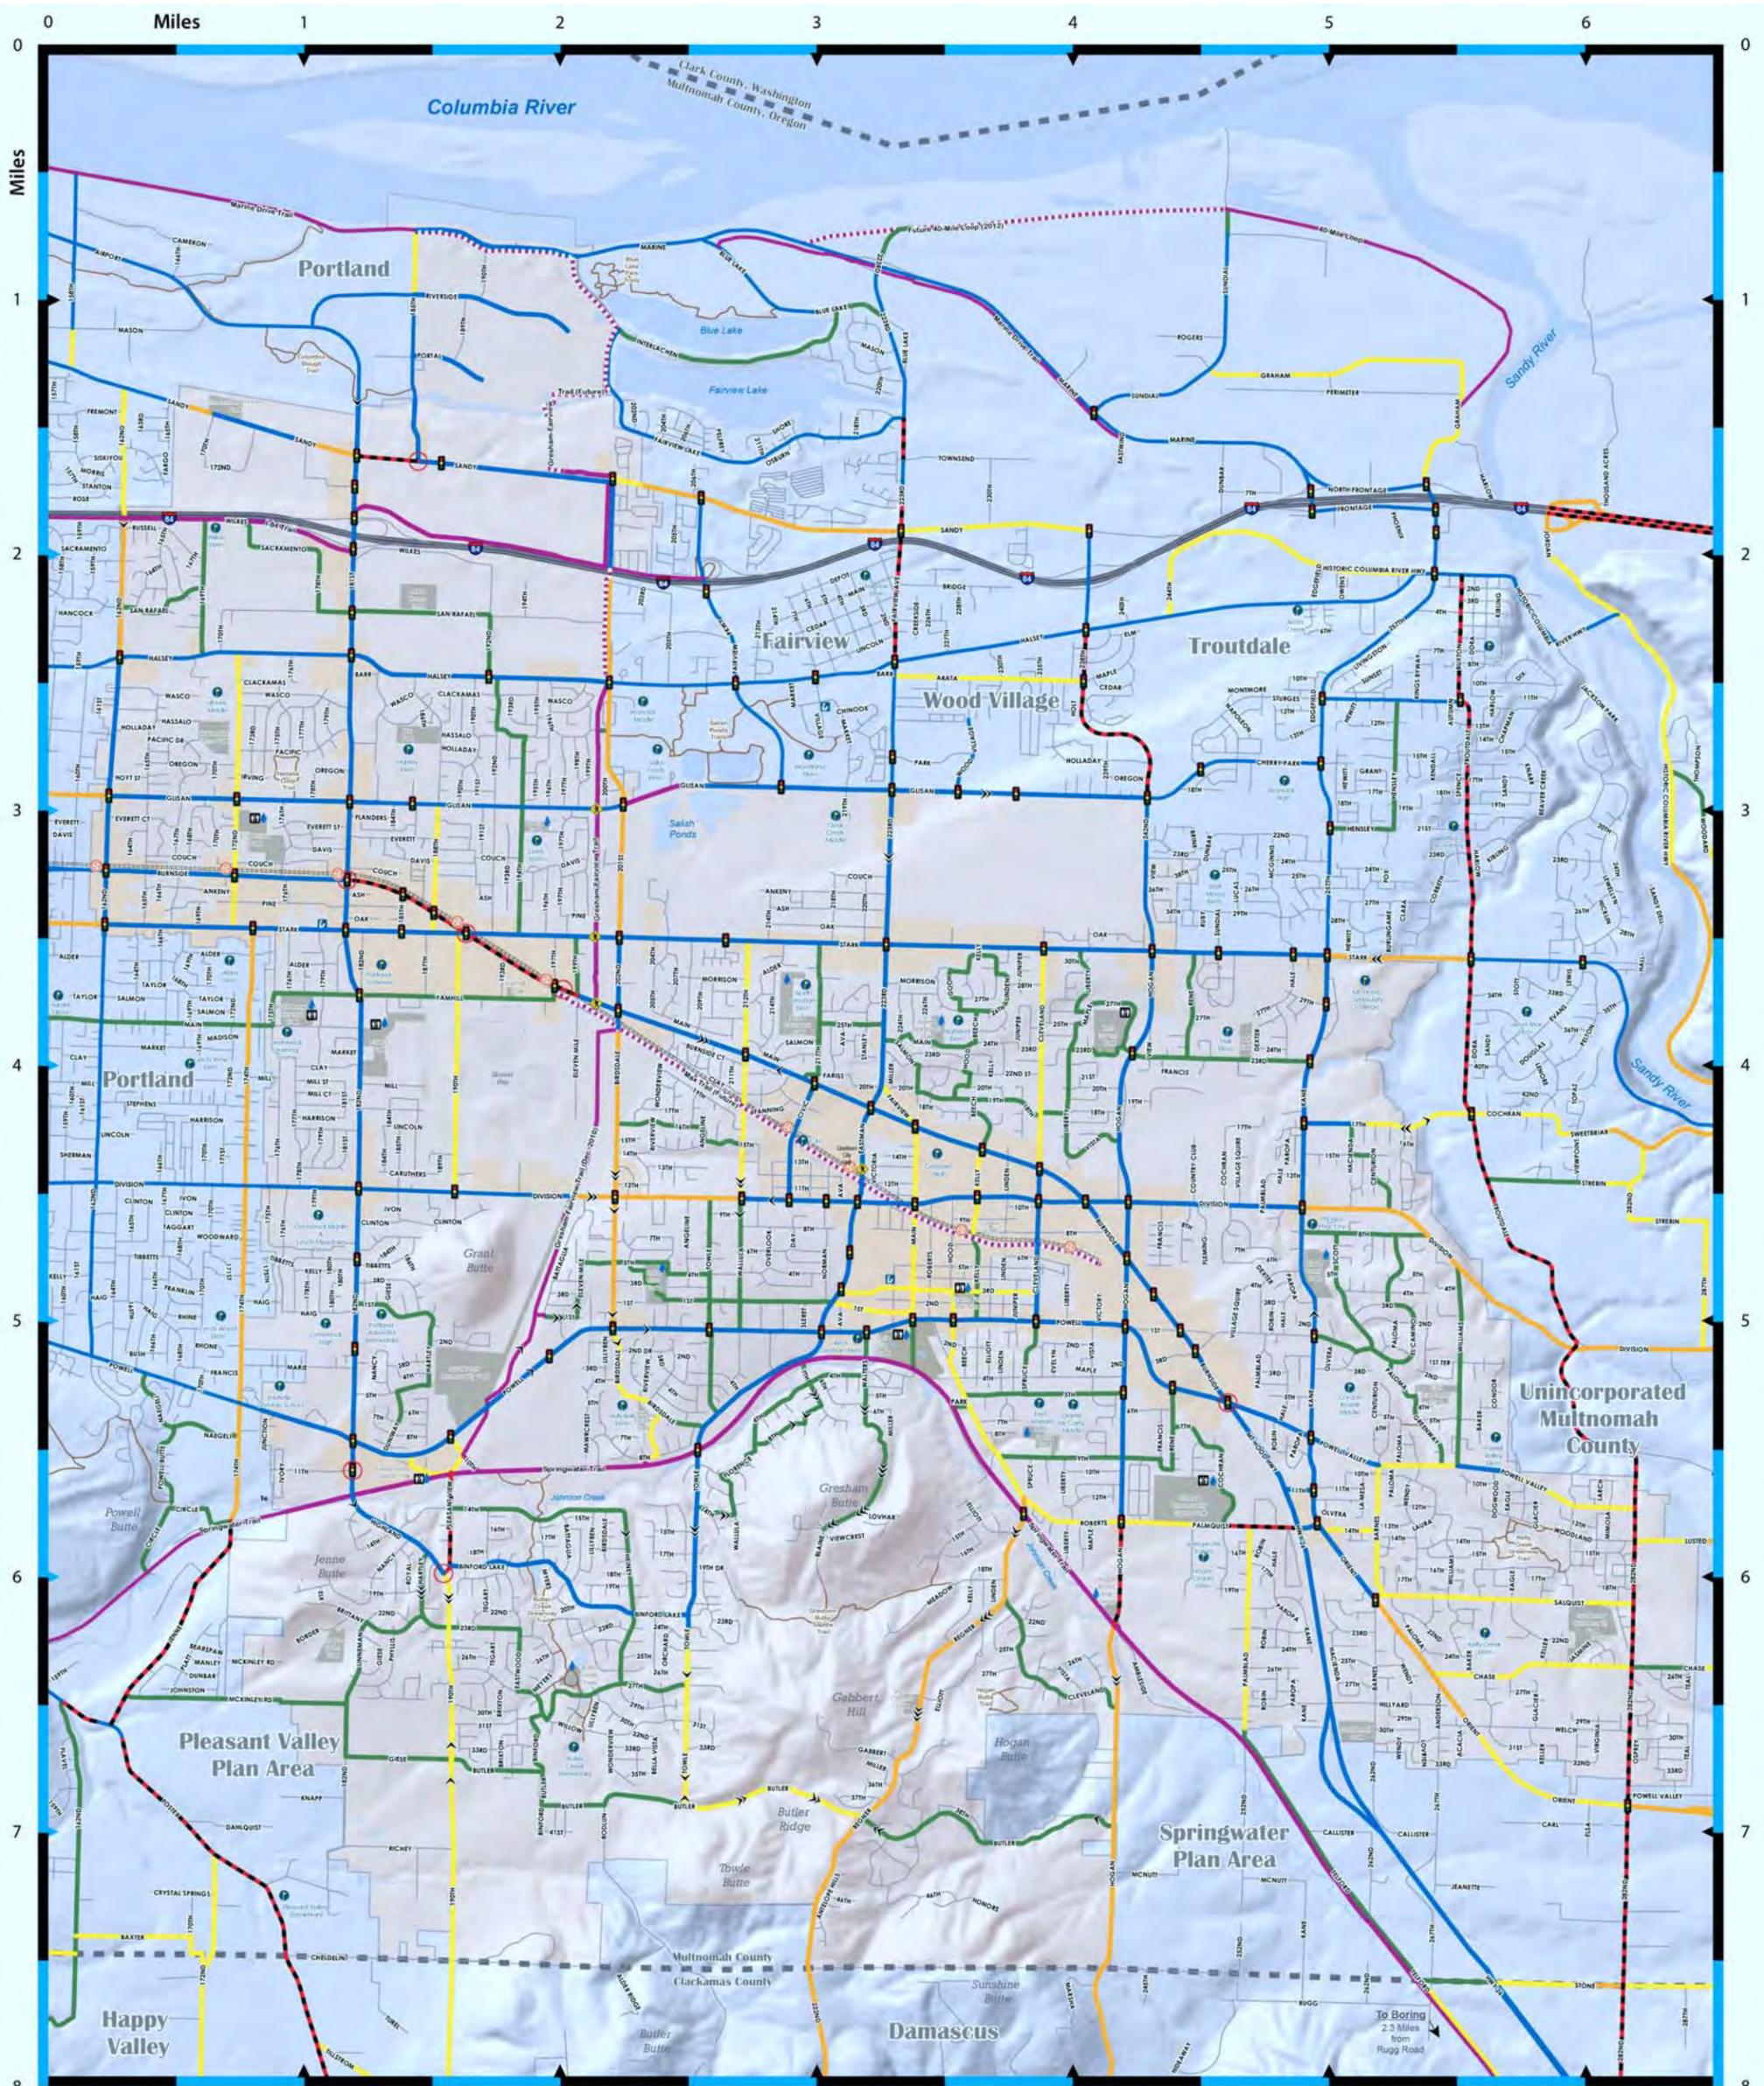

**EXISTING, FUNDED, OR SUGGESTED BICYCLE FACILITIES**

<b>Trails</b>	<b>Bicycle boulevards / advisory bike lanes</b>
— Existing or funded trail	— Existing or funded bicycle boulevard
— Future trail	— Future bicycle boulevard
<b>Separated in-roadway bikeways (bike lanes, buffered bike lanes, cycle tracks)</b>	— Future advisory bike lane (suggested)
— Existing or funded bike lane or separated in-roadway	— Future enhanced shared roadway or advisory bike lane
— Future separated in-roadway	— Future bicycle boulevard or advisory bike lane
— Future separated in-roadway or enhanced shared roadway	<b>Enhanced shared roadways</b>
— Future separated in-roadway or advisory bike lane	— Funded enhanced shared roadway
— Future separated in-roadway, advisory bike lane, or enhanced shared roadway	— Future enhanced shared roadway
	— Future bicycle boulevard or enhanced shared roadway

*For facility descriptions, please see Appendix G, Glossary, of the Portland Bicycle Plan for 2030.*

Map: Portland recommended bikeway network

This map shows the City of Portland's recommended bikeway network, from the Portland Bicycle Plan for 2030, adopted in 2010. The map shows existing, funded or recommended bicycle facilities as of 2010. Some facilities have since been improved. The Portland Bicycle Plan for 2030 provides facility descriptions. Separated in-roadway bikeways separate the bicycle travel lane from motor vehicle travel lanes with striping or a physical barrier. Bike lanes and cycle tracks are examples of separated in-roadway bicycle facilities. Bicycle boulevards are on streets with low traffic volumes where the through movement of bicycles is given priority over motor vehicle travel.

**On-Street Bike Route**

- Bike Lane or Wide Shoulder
- Shared Road - High Volume  
High traffic volume and/or speed
- Shared Road - Medium Volume  
Medium traffic volume and/or speed
- Shared Road - Low Volume  
Low traffic volume and/or speed

**Off-Street Bike Route**

- Off-Street Multi-Use Path  
Wide paved trail shared with pedestrians
- Future Off-Street Multi-Use Path
- Trail  
Narrow path shared with pedestrians  
May not be paved

**Caution Area**

- Difficult Connection  
Use sidewalk, use caution, or find a different route
- Difficult Intersection  
Use caution  
Shown for routes in the City of Gresham only

**Traffic Light**

- Traffic Signal
- Pedestrian Crossing Signal

**Elevation Gain**

- Shown for routes within City of Gresham only
- > Slight Incline
  - >> Moderate Incline
  - >>> Steep and/or Long Incline

**Light Rail (MAX)**

- Light Rail Stop
- Light Rail Line

**Park & Amenities**

- Park
- Public Restroom
- Water Fountain

**Points of Interest**

- School
- Library
- Commercial Area

## Existing Bicycle Facilities and Planned Projects

### Existing facilities

While the project corridor offers some existing bicycle facilities, such as bicycle lanes on arterials and bicycle boulevards on local streets, there are many gaps and deficiencies remaining in the planned bicycle network.

Within the project study area:

- West of 82nd Avenue a more connected network of streets with lower traffic volumes and speeds provide more route options for bicycle travel. East of 82nd Avenue the grid breaks down and there are few routes that provide for travel parallel to Division. The closest parallel route north of Division is the 4M Neighborhood Greenways, and the closest route South of Division is outer Powell.
- Powell Boulevard currently has standard bike lanes east of I-205, but lacks any bicycle facility between the Willamette River and I-205.
- Division Street includes standard bike lanes from 60th Avenue to the city limits and buffered bicycle lanes in Gresham from city limits to the Gresham-Fairview Trail just west of Birdsdale Avenue, and from Wallula Avenue to Kane Drive in Gresham.
- Division Street lacks bike lanes west of 60th Avenue. The Clinton/Woodward Street bike boulevard currently provides a parallel route from 12th Avenue to 87th Avenue.
- 82nd Avenue has no bicycle facilities.
- Several existing multi-use paths cross through the corridor, including the north-south I-205 multi-use path (MUP), the north-south Gresham-Fairview Trail, and the east-west Springwater Corridor Trail.

**Table 1**, below, lists the roadway segments identified as transit route alternatives. For each of the segments the existing bicycle facilities, if any, the regional bicycle functional classifications, and local planned facility types is identified. Consistency among plans is also noted.

<b>Table 1: Existing and planned bicycle facilities</b>				
<b>Roadway segments on transit route alternatives</b>	<b>Existing facilities</b>	<b>Regional Active Transportation Plan bicycle functional classification</b>	<b>Portland and Gresham Transportation System Plan planned facility type/project in plan</b>	<b>Notes</b>
Powell Blvd from Ross Island Bridge to SE 17 <sup>th</sup> Ave	None	Local	Portland: separated in-roadway/no projects identified in plan other than crossings	Plans are consistent
Powell Blvd from SE 17th Ave to SE 50th Ave	None	Regional Bicycle Parkway	Portland: separated in-roadway/	Plans are consistent
Division St from SE 12th Ave to SE 50th Ave	None	Local Bikeway	Portland: separated in roadway	Plans are consistent
Powell Blvd from SE 50th Ave to SE 82nd	None	Regional Bikeway	Portland: separated in roadway/ project between 72 <sup>nd</sup> and I-205	Plans are consistent
Division St from SE 50th Ave to I-205 bike path	No bicycle facilities west of 60 <sup>th</sup> Ave. Standard bike lanes from 60th Avenue to Portland city limits;	Regional Bicycle Parkway	Portland: separated in roadway Gresham: separated in roadway	Regional and local plans are consistent
Division St from I-205 bike path to Hogan	Standard bike lanes from I-205 MUP to Portland city limits; Buffered bicycle lanes in Gresham from city limits to the Gresham-Fairview Trail just west of Birdsdales Avenue, and from Wallula Avenue to Kane Drive. No bike facilities between Birdsdales and Wallula.	Regional Bikeway	Portland: separated in roadway Gresham: separated in roadway	Plans are consistent
SE 50th Ave from Woodward St to Division St	None	Regional Bicycle Parkway	Portland: no recommendation	Defer to RTP
SE 50th Ave from Powell Blvd to Woodward St	None	Local Bikeway	Portland: no recommendation	Plans are consistent
SE 52nd Ave from Powell Blvd to Division St	6' bike lanes. Cross section is 8-6-10-10-6 (parking, bike lane, 2 x travel lanes, bike lane).	Regional Bicycle Parkway	Portland: separated in roadway	Plans are consistent
Hogan Dr from Powell Blvd to Stark St	Bicycle lane	Regional Bicycle Parkway	Gresham: bicycle lane	Plans are consistent
Eastman Parkway from Division St to Stark St	Bicycle lanes	Regional Bikeway	Gresham: Bicycle lane	Plans are consistent
Cesar Chavez Blvd	None	Local Bikeway	Portland: no recommendation	Plans are consistent
SE 82nd Ave	None	Local Bikeway	Portland: separated in-road facility (2030 Bike Plan); bike safety/access (updated TSP)	No designation yet in TSP (currently being updated). Defer to 2030 Bike Plan

NOTE: Portland and Gresham bicycle plans are or will be consistent with the Regional Transportation Plan (RTP), once the RTP is updated. While the RTP does not designate facility types for regional bicycle routes, the plan does give guidance on the type of facilities and level of desired separation for routes on the regional network. Local plans may “go beyond” the regional plan (e.g. 82nd Ave) but cannot be “less than” the regional plan.

## Planned Projects

Data from the 2011 Oregon Household Activity Survey indicates that the average length of bicycle trips within the region is three miles, and the average trip length for trips that combine bicycle and transit is ten miles. Additionally, bicycle projects are eligible for Federal transit Administration (FTA) funding within a three mile radius of FTA funded transit projects. For these reasons bicycle projects in the Regional Transportation Plan, and Portland and Gresham Transportation System Plans that are within three miles of the center of the corridor were identified.

The FTA policy acknowledges that walking, bicycling, and public transportation are complementary modes of transportation: many people access public transportation by walking a short distance; others arrive by bicycle. The success of public transportation can often be limited by poor “first and last mile” access to the system. Further, safe walking and bicycling access can be important inducements to using public transportation. Thus, it is essential to develop safe, secure, and appropriate pedestrian and bicycle infrastructure if the users of public transportation are to have safe, convenient, and practical access routes to, as well as appropriate amenities to enhance the utility of transit.<sup>1</sup>

Within a three mile buffer there are approximately 300 bicycle projects or projects that include a prominent bicycle element (e.g. crossings along Powell Blvd). Projects were drawn from the 2014 Regional Transportation Plan and the Portland and Gresham Transportation System Plans. Portland is currently updating its Transportation System Plan; projects were drawn from the new plan. Bicycle projects identified in local plans, new projects or through this process may need to be added to the Regional Transportation Plan to complete the bicycle element of the Powell-Division Transit and Development Project. Please see Appendix 1 for a list of projects within one mile of the alternative transit routes. A full list of all projects within the 3-mile buffer is available on the Powell-Division Transit Project webpage.

Additionally, details on relevant projects within the study corridor are highlighted below.

- Portland has identified the 4M Neighborhood Greenway, along Market, Mill, Millmain, and Main as a priority project for the city. It was also identified as one of the Portland Bicycle Advisory Committee’s top ten projects for the Transportation System Plan update. The planned neighborhood greenway is approximately half a mile north of Division. This route is likely to be developed more like an enhanced shared roadway project, rather than a neighborhood greenway, due to traffic volumes and because the route is an emergency response route prohibiting certain traffic calming treatments.
- The East Portland Access to Transit project received \$4.2 M of regional flexible funds. The original scope of the project included buffered bicycle lanes along Division from I-205 to 130th Ave. Implementation of buffered bike lanes was deferred for coordination with the Powell-Division Transit Project, with the understanding that those improvements would be included in the Powell-Division Transit Project.

---

<sup>1</sup> US DOT Federal Transit Administration, Bikes and Transit [http://www.fta.dot.gov/13747\\_14399.html](http://www.fta.dot.gov/13747_14399.html)

- ODOT is currently working on the Outer Powell safety improvement project. Project plans include new lane striping, wheelchair ramps, a slightly wider shoulder for pedestrians and bicyclists, and traffic devices to slow speeding, avert crashes and nab drivers who run red lights.

The following map shows existing bicycle facilities, projects identified in local and regional plans (including projects that are funded and/or under-construction), and gaps in the planned bicycle network. The map includes:

- projects from the Regional Transportation Plan, Gresham and Portland Transportation System Plans
- projects from 2010 to 2040
- projects that are funded/under construction (e.g. the Twenties Bikeway in Portland and the Gresham MAX Path)
- projects that are on financially constrained project lists
- projects that are on unconstrained project lists
- gaps (shown in red) illustrate no bicycle facility and no identified project in any of the plans consulted
- existing bikeways (does not indicate whether the bikeway is deficient)

Refer to the list of projects in Appendix 1 for project details.

## Bicycle Concepts

The purpose of the concepts is to provide a framework to guide discussion and decision making of the Steering Committee, the Project Management Team and other stakeholders. The concepts will be used to identify an approach and list of bicycle projects that will provide a connected, complete, safe and comfortable bicycle route from downtown Gresham to downtown Portland, access to transit and destinations along the corridor, reduce congestion, and achieve the multiple benefits associated with increasing bicycling.

Using the concepts as a framing device, stakeholders will be able to analyze and better understand the challenges, opportunities and tradeoffs with each of the conceptual approaches. The concepts are purposefully constrained to highlight the challenges, opportunities and trade-offs.

A data driven approach during the design process will be used to refine and evolve the concepts. For example, identifying which bicycle concepts could potentially result in the greatest access to bicycling and destinations. The design phase of the project is a crucial stage of analysis – the final bicycle concept will not be able to be determined until various design approaches, that include all modes, are vetted. As of yet, no determination has been made on the cross-section widths along the potential transit routes. Nor is it known if or by how much it will be necessary to widen the right-of-way. How wide the streets along the route will be in various segments and whether or not the curb lines move will largely depend upon whether the bus is in mixed traffic, if there is a dedicated busway in one direction or two and the design of pedestrian and bicycle facilities. Bus rapid transit is a flexible technology, and the design in some cases may change block by block. Using the concept approach also promotes achieving a connected and complete bicycle route along the corridor, as opposed to a handful of projects that may fix local gaps but do not result in a seamless corridor from downtown Gresham to downtown Portland. Criteria used to help identify the preferred concept and bicycle elements included in the transit alternative should include:

- connections to businesses and other destinations;
- connections to transit;
- connections for communities of concern;
- increasing levels of bicycling;
- impacts to existing buildings and properties;
- enhancing safety for bicycling;
- enhancing comfort for bicycling; relevant policies and bicycle functional classifications.

### Concept 1: Shared

Concept 1 illustrates the concept of a continuous bikeway along the entire bus rapid transit route. The central idea for this concept emphasizes direct, efficient travel for bicycling and direct access to the destinations along the transit route. This concept focuses on bikeways along the transit route, and does not show access to the transit route from other areas in the corridor. For example, if this concept were pursued bikeway projects would be focused along the transit corridor and less or no attention would be

given to the bikeways accessing the transit corridor. Developing this concept could necessitate the acquisition of right-of way and removal of parking on some segments of the route. Gresham has already removed parking on Division and installed buffered bicycle lanes.

### **Concept 2: Parallel**

Concept 2 illustrates providing bikeways on streets parallel to the bus rapid transit route. Because of a lack of street connectivity this concept illustrates out of direction travel along many segments of the route for anyone wanting to access the transit corridor and destinations along the corridor. East of 82nd Avenue there is not a good option south of Division before Powell. The concept illustrates access to the transit route and destinations along the route via streets that connect to the transit route. The concept assumes that to provide sufficient connection every street would need to provide access and these streets would need enhancements such as traffic calming, wayfinding and signage. This concept provides a less direct bicycle route. It also does not increase safety or access along the transit route for people bicycling. Existing bicycle facilities along the transit route would be maintained.

### **Concept 3: Hybrid – shared + parallel**

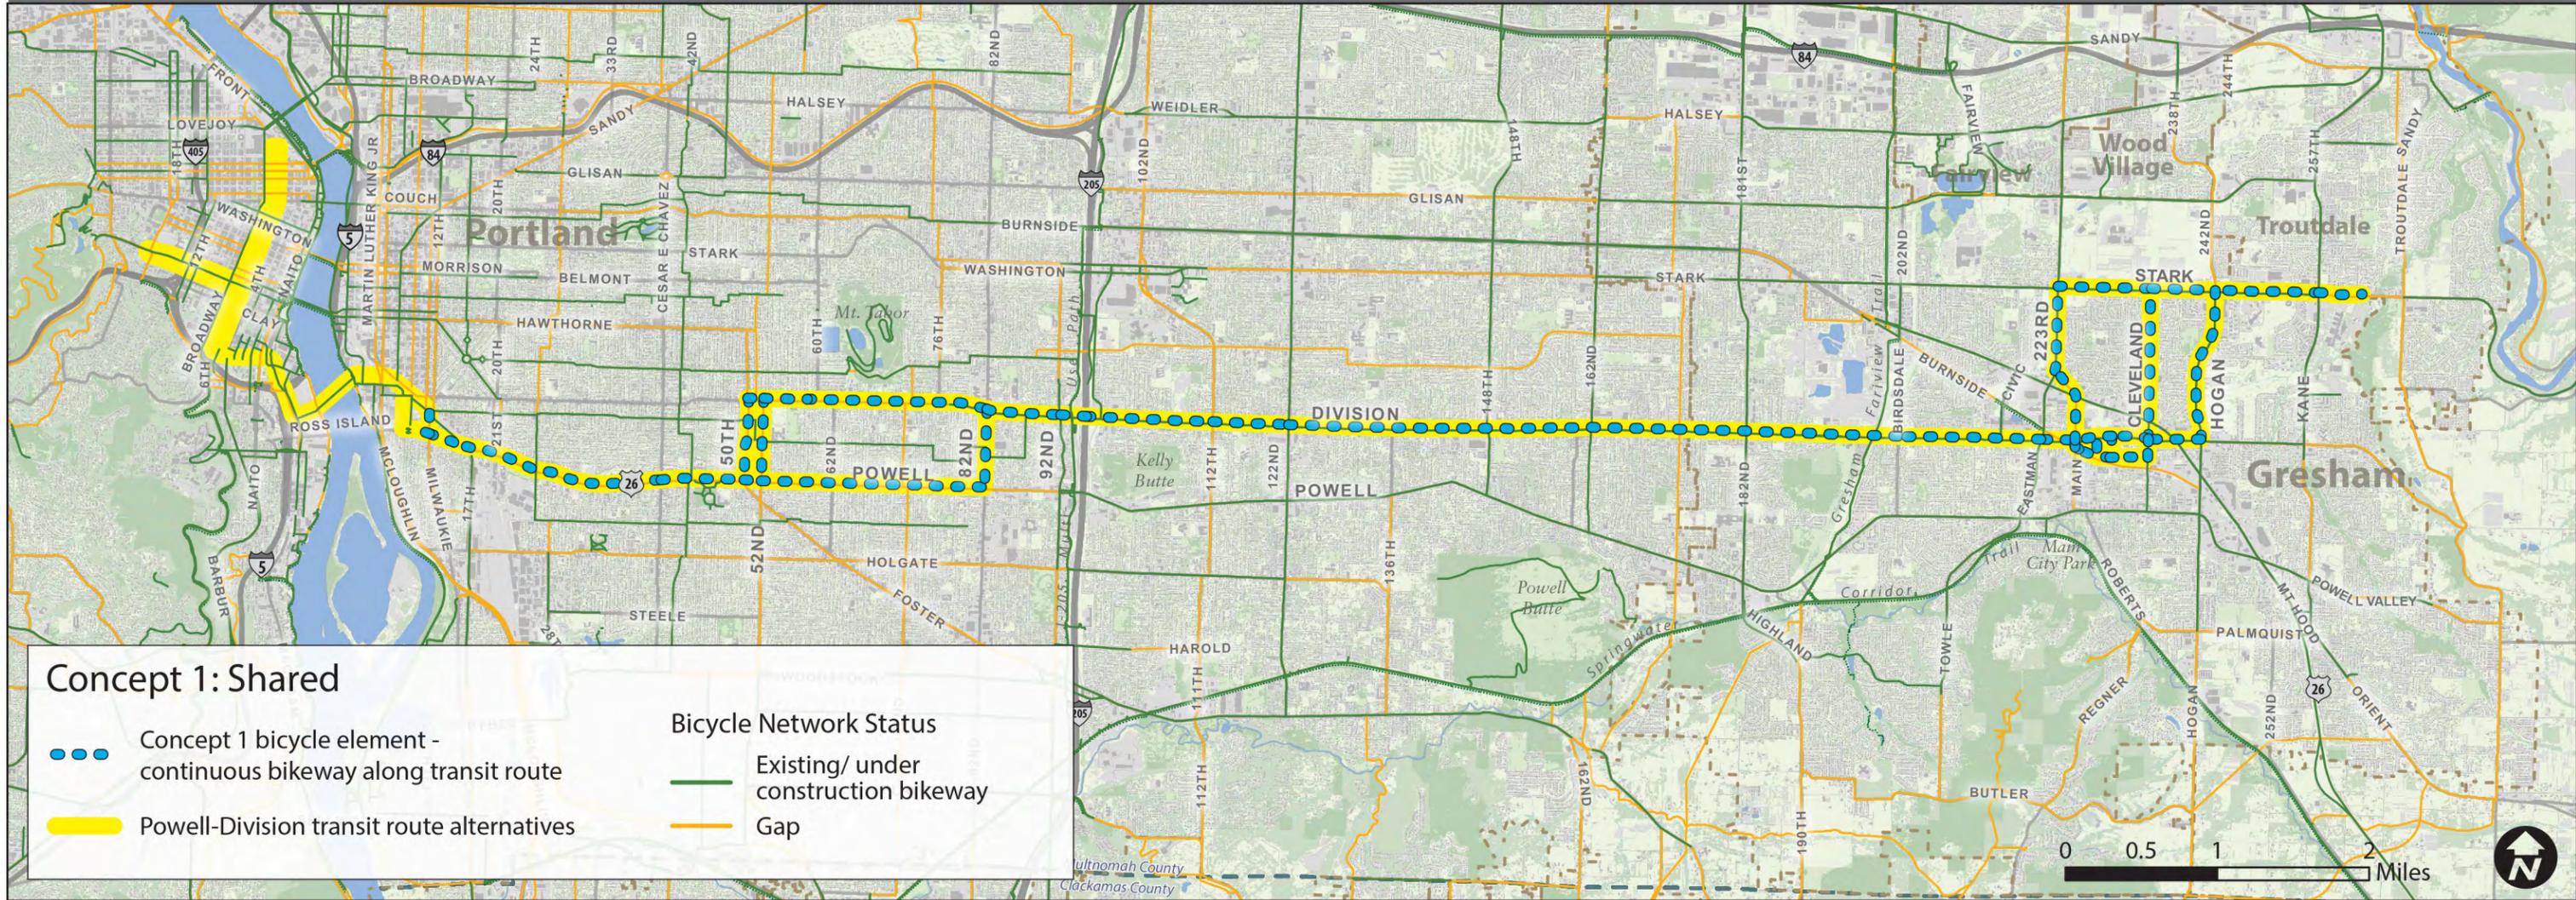

Concept 3 illustrates a hybrid of the first two concepts. This concept takes advantage of a more connected street grid west of 82nd Avenue and responds to the lack of connectivity east of 82nd Avenue. West of 82nd Avenue, the concept shows bikeways on streets parallel to the bus rapid transit route. There are few options for a connected route that does not go out of direction and that is within a few blocks of the transit route. East of 82nd Avenue the concept shows a bikeway on SE Division. The concept illustrates access to the transit route and destinations along the route via streets that connect to the transit route. Providing sufficient connections could include enhancements such as traffic calming, wayfinding and signage. Removal of parking would likely be needed on segments of Division. Gresham has already removed parking on Division and installed buffered bicycle lanes.

### **Concept maps**

On the following concept maps, the yellow line shows the current bus rapid transit route options. The “blue dotted line” illustrates the bicycle route(s) that would be emphasized and improved as part of the project. Any existing bicycle facilities not on the “blue dashed line” route would be maintained.

- Lack of a blue line does not imply no bike facility/or that a bike facility will be removed. No bicycle facilities will be removed as part of the project.
- Along the “blue dashed line” existing bicycle facilities would be enhanced if deficient and all gaps would be filled whether or not a project is currently identified in a plan.
- The blue lines provide a way of narrowing bicycle projects to be included in the project by identifying those bicycle projects that help complete the bicycle route and increase access to transit.

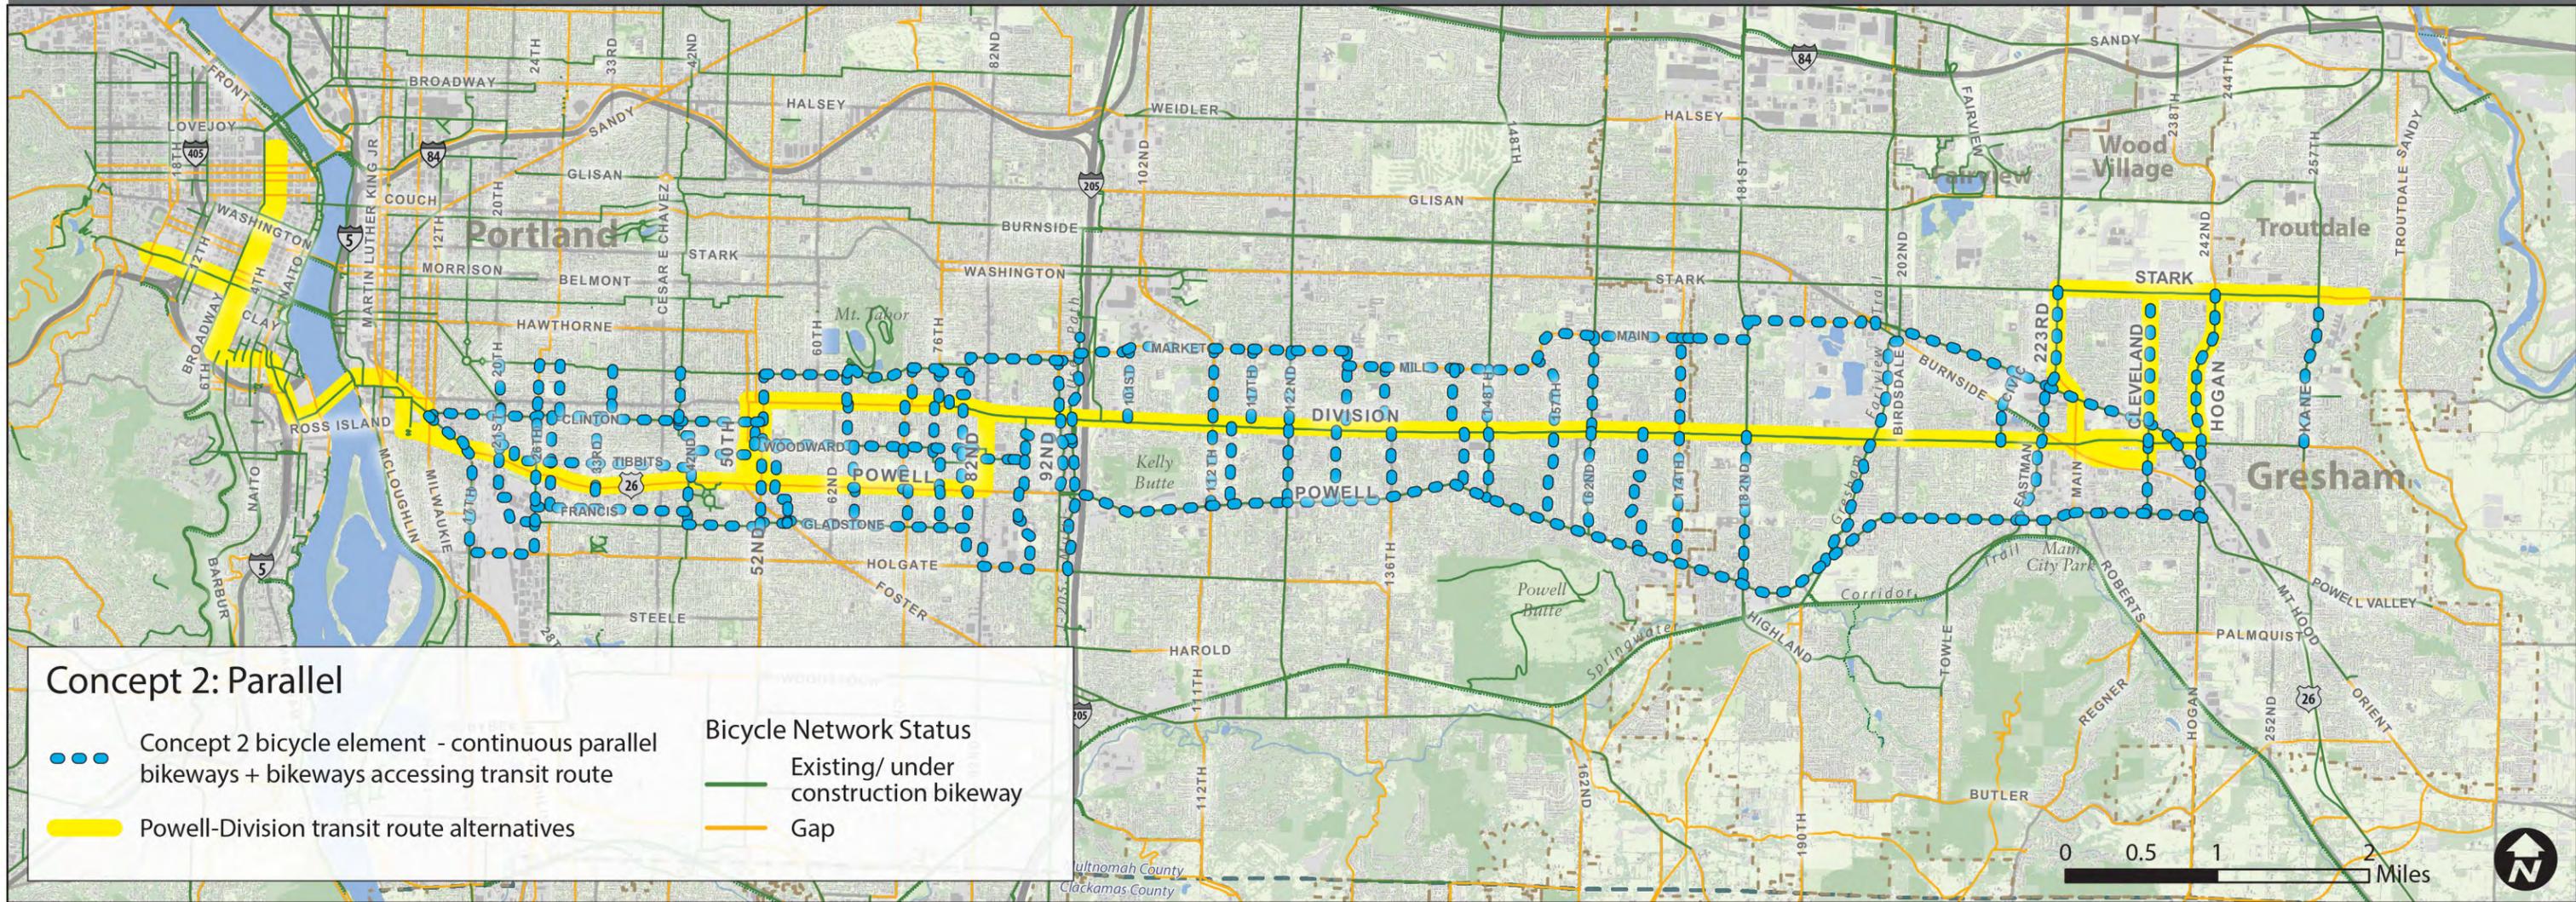

# Powell-Division Transit and Development Project

Concept lines (blue dotted lines) illustrate an approach for the bicycle elements of the transit project; they do not indicate presence, lack of, or deficiency of a bikeway. Absence of concept lines does not indicate that existing bikeways will be removed; no bikeways will be removed in the project.

**REVIEW DRAFT**

# Powell-Division Transit and Development Project

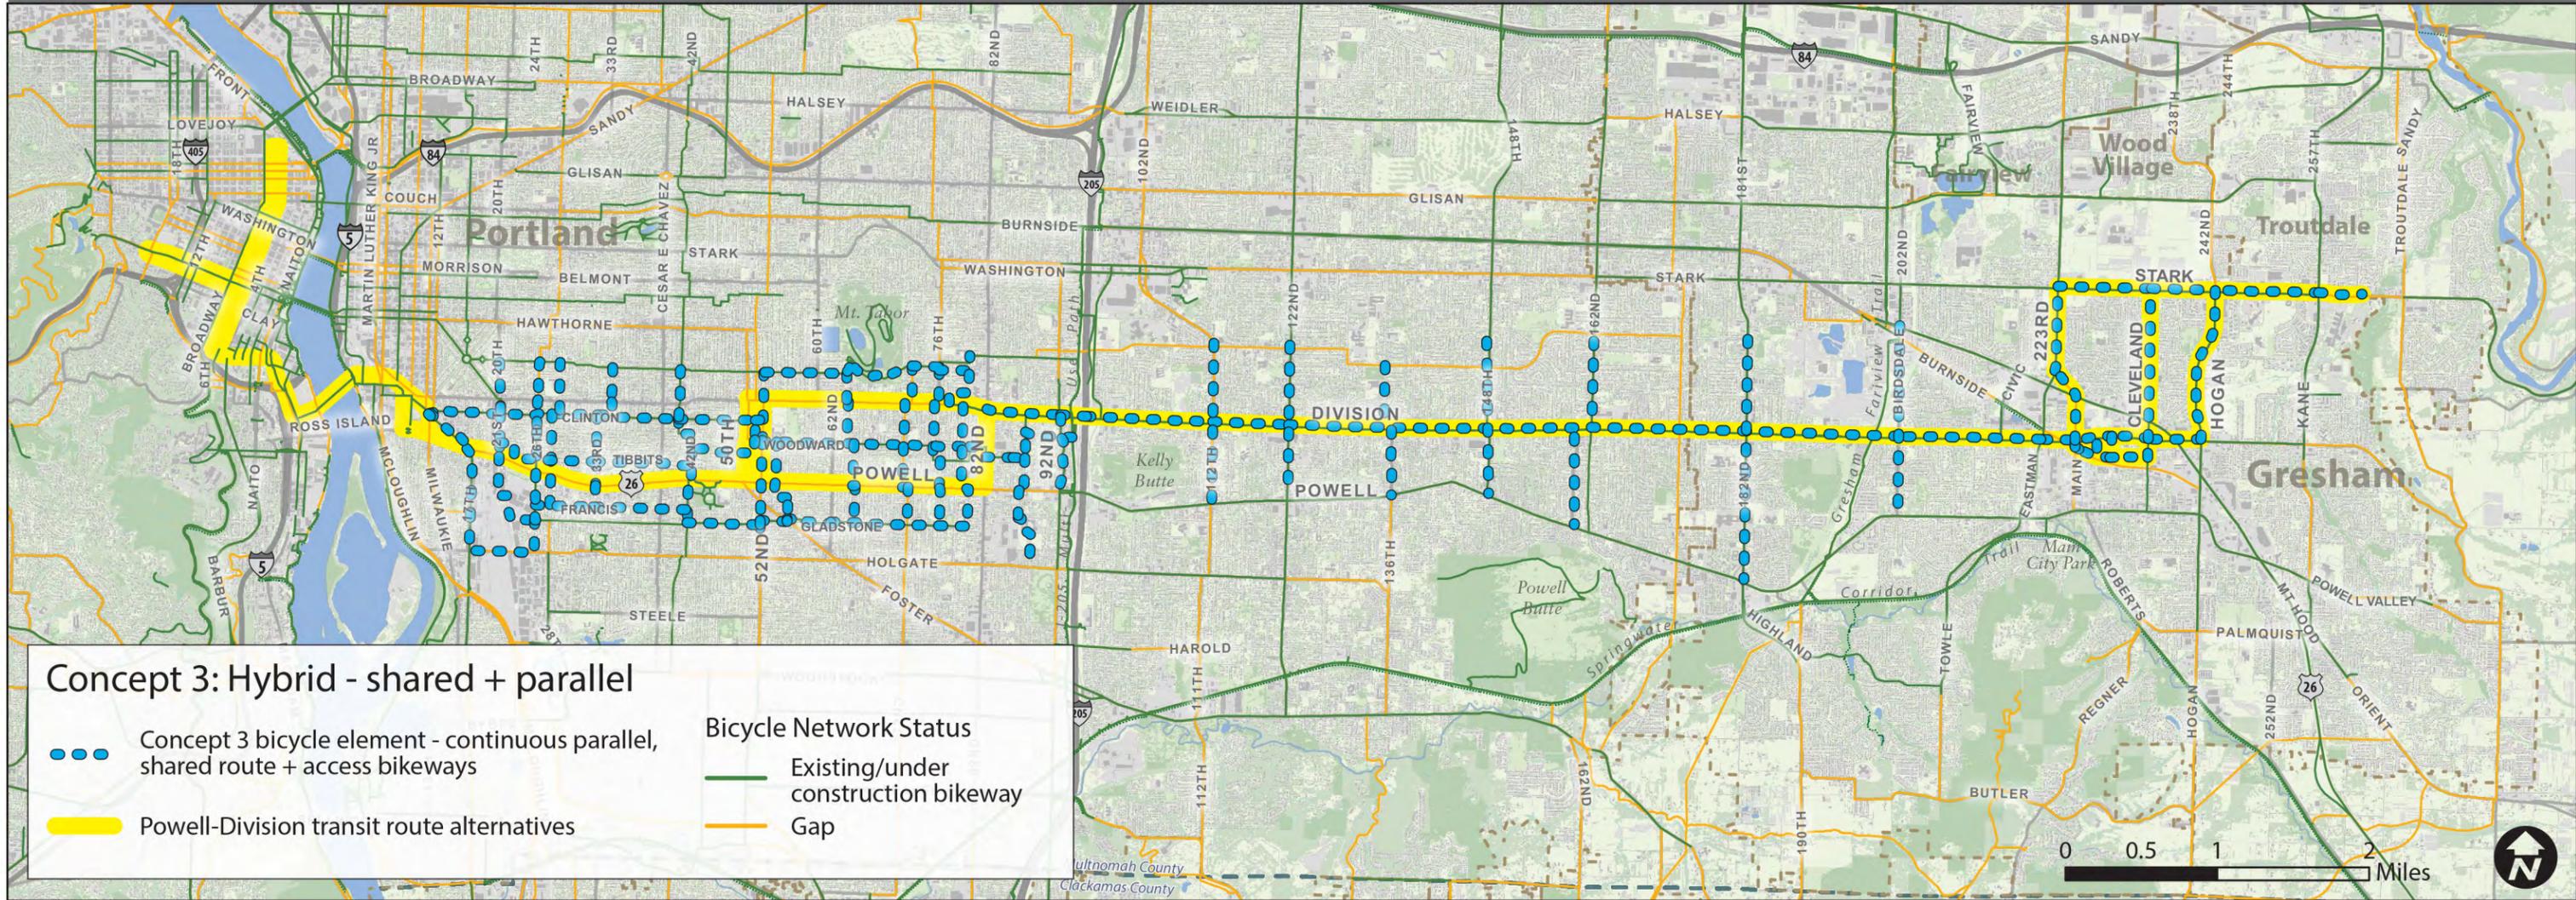

Concept lines (blue dotted lines) illustrate an approach for the bicycle elements of the transit project; they do not indicate presence, lack of, or deficiency of a bikeway. Absence of concept lines does not indicate that existing bikeways will be removed; no bikeways will be removed in the project.

N/S connections are 0.25 to 0.5 miles apart. Parallel boulevards are 0.25 to 0.75 miles from transit routes (0.5 mile away for most of the route).

**REVIEW DRAFT**

# Powell-Division Transit and Development Project

Concept lines (blue dotted lines) illustrate an approach for the bicycle elements of the transit project; they do not indicate presence, lack of, or deficiency of a bikeway. Absence of concept lines does not indicate that existing bikeways will be removed; no bikeways will be removed in the project.

N/S connections are 0.25 to 0.5 miles apart. Parallel boulevards are 0.25 to 0.5 miles from transit route.

**REVIEW DRAFT**

## Appendix 1: List of Identified Projects within 1 mile

PD ID	RTP ID	Project Name	Description	Budget Status	Time Frame	Source Agency	Est. Cost	Dist. to PD Routes (in mi)
1009	10166	Outer W Burnside Corridor Improvements	Widen street to add bicycle facilities, improve sidewalks, lighting, crossings and provide traffic *	Unconstrained	11-20_YRS	Portland	\$13,573,745	0.5
1011	<Null>	Fairview Blvd Bikeway	Design and implement bicycle facilities.	Unconstrained	11-20_YRS	Portland	\$30,668,294	1
1012	<Null>	SW Patton Rd Ped/Bike Improvements	Design and implement pedestrian and bicycle facilities.	Unconstrained	6-10_YRS	Portland	\$5,719,678	1
1018	<Null>	US 26 Multi-use Path	Design and implement a multi-use path.	Constrained	11-20_YRS	Portland	\$1,596,000	0.5
1021	<Null>	NW Everett/Glisan Corridor Improvements	Install improved pedestrian crossings, remodel traffic signals, improve signage at freeway crossing*	Constrained	11-20_YRS	Portland	\$4,000,000	0.25
1025	<Null>	Montgomery Bikeway	Design and implement bicycle facilities.	Unconstrained	<Null>	Portland	\$1,082,000	0.25
1028	<Null>	NW/SW 20th Ave Neighborhood Greenway	Design and implement bicycle facilities.	Constrained	6-10_YRS	Portland	\$623,000	0.25
