

HCT OPTIONS UNDER CONSIDERATION

-  Terminus Option
-  Bus Rapid Transit (BRT) Options
-  Light Rail (LRT) Options
-  Options for BRT or LRT
-  Tunnel Segments
-  WES Commuter Rail

Existing HCT termini in the Portland region are usually constructed at existing major destinations and are at or within three stops of a transit center.

Most existing termini also include a large park-and-ride.

The steering committee will determine in December which terminus options will continue to be studied.

There are many factors to consider in selecting a preferred southern terminus:

- ease of access by car, bus, bikes and pedestrians
- cost effectiveness
- effect on travel time and ridership
- impacts on traffic
- potential for future HCT expansion
- equity concerns
- impact to surrounding areas
- local community support
