Steps for using bleach

REDUCE EXPOSURE

Keep children away while mixing, sanitizing or disinfecting.

- Purchase fragrance-free, regular strength bleach.
- Wear gloves, protective eyewear and apron.
- Open doors and windows to let in fresh air.
- Measure carefully.
- Mix in standard quart (32 oz.) or gallon (128 oz.) containers.

PROPER MIXING

Bleach breaks down quickly in water. Make solutions fresh each day.

- Mix bleach with room-temperature water.
- After mixing, test sanitizer's strength with a test strip.

PROPER USE

Label all bottles and buckets either "Bleach Sanitizer" or "Bleach Disinfectant."

- Clean surfaces first with soap and water. Rinse with clean water.
- Let surfaces air-dry, or set timer for two minutes and wipe dry.

SAFE PRACTICES

Store bleach and solutions out of reach of children and away from food.
