

Email from Scott Farling, Agilyx received July 13, 2017

Dan,

Attached please find Agilyx's comments regarding the proposed revisions to Metro Code Chapter 5.01.

5.01.030 (b) should include "conversion to petrochemical products" along with reuse and recycling as accepted means of disposal for source-separated recyclable materials. (Note: 5.01.040 (b) refers back to 5.01.030 (a), (b), (d), and (f).)

5.01.040 (a) (4) should include the information under the heading "Characteristics of CT Facilities Exempt from Obtaining a Metro License" from page 10 of the MRF-CT Recommendations for SWAAC Final.

CT facilities that receive feedstocks that have already been extracted from mixed solid waste and otherwise processed to conform to prescribed specifications and largely resemble commodity feedstocks (material streams) for direct introduction into a conversion technology process may have the following characteristics:

- The facility does not accept unprocessed, mixed solid waste from collection trucks/containers, reload facilities, or other solid waste generators.
- A majority of feedstock material is used productively in conversion process.
- Feedstock specifications are prescribed to conform to the specific conversion technology industrial process requirements.
- Shredding, mixing, right-sizing or other similar treatment of already sorted and processed feedstocks typical in a manufacturing process does not constitute "processing of solid waste".
- The facility's receipt and processing of the feedstock presents low potential risk to the environment, or to neighboring businesses and residential communities (e.g., odors, dust, noise, vectors, litter, fire safety etc.).

Please feel free to contact me with any questions or comments.

Best regards,

Scott Farling
