Project Summary

In the southeast corner of Bard park, a fun shaped covered structure is proposed to shelter people who use the existing play area. The new shade structure will drain to a newly planted rain garden that may attract amphibians at certain times of year. Native plants with plant signage will line the side of the path opposite the play area.

Note: A separate initiative is already funded and underway to improve accessibility for play at this park. Check out the sketches from the workshop to see other ideas that community members suggested around play elements and access for this location.

Project Cost

The total cost for Covered Outdoor Play at Bard Park is an estimated \$227,500. The covered structure would be \$100,000. The rain garden and native plants cost \$35,000. Permitting fees at \$10,000 and Project development fees at \$30,000 must also be considered. A 30% contingency cost is included in the estimate.
